

ADAMS HLS-3

The Adams combo spreader, specifically designed for Big W Sales, is a multi-functioning unit that allows for the application of Gypsum, Lime or Fertilizer. The combo spreader is designed for tractor hydraulics. The spinner assemblies on these units are designed as an attachment, which makes them easy to take on and off of the unit when other application needs are required. A custom designed conveyor belt banding unit and banding diverter are available as options, which make this one of the most diverse spreaders on the market today.

COMBO SPREADER

(GYPSUM/LIME/FERTILIZER)
